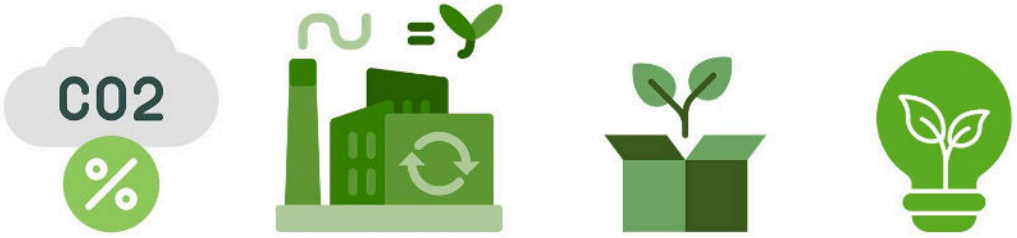
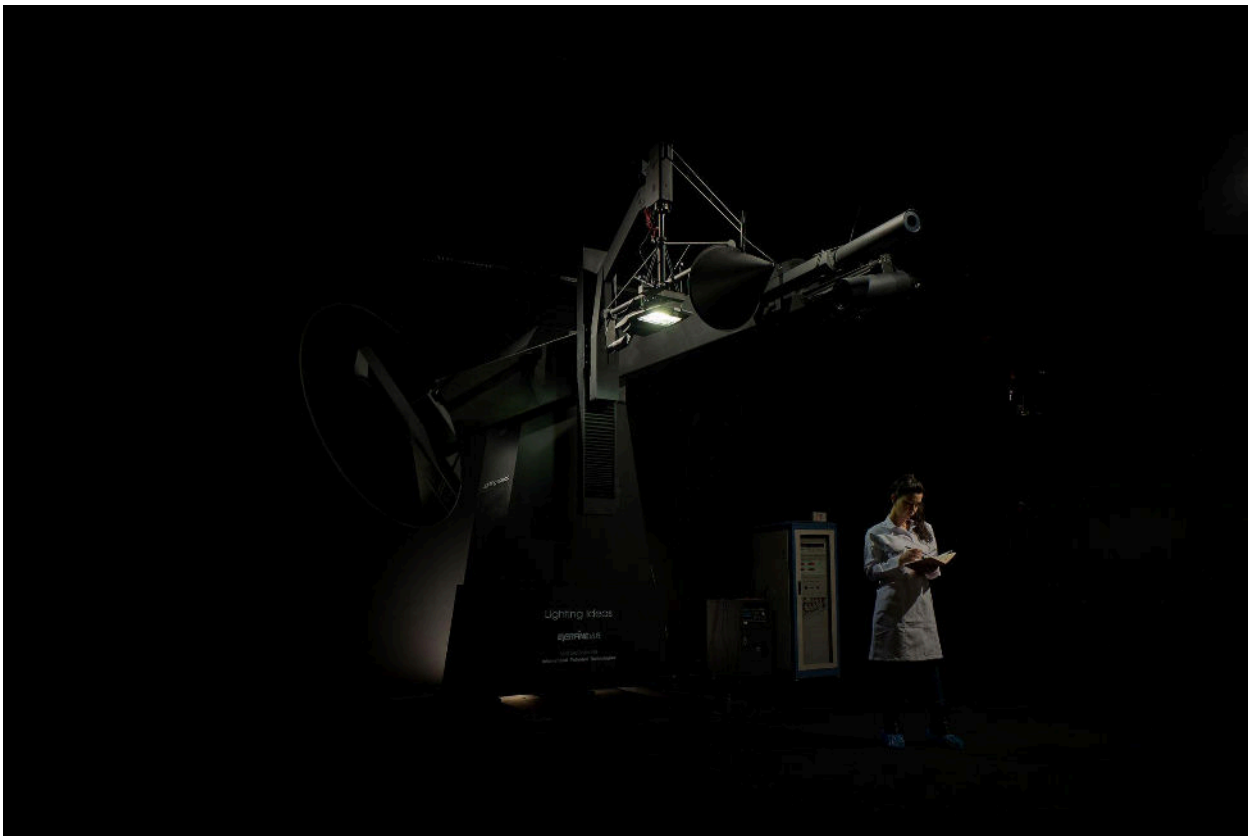
HEPER Sustainability Commitment

At HEPER, we recognize the importance of sustainability in the lighting industry and are committed to fulfilling our responsibilities for the future of our planet. We place sustainable practices at the heart of our business processes to minimize our environmental impact and leave a livable world for future generations.

Environmental Responsibilities



HEPER is aware of its environmental responsibilities and aims to reduce its total carbon footprint with day by day progress. To achieve this, we focus on renewable energy use, energy efficiency improvement projects, and waste minimization strategies in our production processes. We work to minimize our environmental impact by implementing these strategies one by one through carefully planned projects.



- Energy Efficiency

Our approach to sustainability includes adopting circular economy principles, ensuring that our products and processes are as resource-efficient as possible.

When designing and manufacturing our products, we prioritize energy efficiency. By offering high-performance, low-energy consumption lighting solutions, we aim to reduce energy usage. At the same time, we use high-quality materials and continuously improve our production processes to extend the lifespan and increase the durability of our products.

- Use of Renewable Energy

We are committed to reducing our carbon footprint and implementing environmentally friendly production processes by transitioning to renewable energy sources at our factory. Our solar energy system on the factory roof allows us to meet all our electricity needs with renewable energy.

- Recycling and Sustainable Material Use

In our production processes, we implement effective waste management strategies to minimize the amount of waste generated. We continuously make improvements to increase the recyclability of our waste and develop innovative solutions to reduce environmental impact. By analyzing the materials currently used in our product manufacturing, we are transitioning to recyclable materials to further minimize our environmental footprint.

The modular design of our products allows lighting modules to be easily replaced, enabling the reuse of product bodies for many years. This modularity extends the

lifespan of the products and reduces waste, promoting efficient use of resources. We continue to develop solutions that minimize environmental impact in our product designs and take innovative steps toward a sustainable future.

We are committed to minimizing plastic use in our production and operational processes. By opting for recyclable and environmentally friendly materials, we aim to reduce the negative impact of plastic waste on nature. In line with this commitment, we are in a process to use recyclable materials, reducing plastic use in our packaging processes.

Social Responsibility

We are conscious of our responsibilities to society and the environment. By prioritizing social benefit in our business processes and projects, we aim to contribute to a sustainable future. Through social responsibility projects carried out on both local and global scales, we strive to reach all segments of society and create a positive impact.

- Investing in Our Employees

At HEPER, we view the well-being and happiness of our employees as one of our highest priorities. We offer various programs and opportunities to support their professional development and ensure a healthy work-life balance. Additionally, we

provide a safe and motivating work environment that allows each employee to reach their full potential. We regularly gather feedback to enhance employee engagement and satisfaction and continually make improvements.

To increase environmental awareness among our employees, we take steps to educate and incentivize them on sustainability, carbon footprint reduction, and energy efficiency through training and gamification. This way, we encourage the adoption of sustainable behaviors not only in the workplace but also in their personal lives.

- Awareness and Healthy Living

To promote healthy living and environmental awareness in the community, we organize various sports events. Through these activities, we highlight the importance of physical activity and emphasize the value of working together for a sustainable future.

- Dark Sky Advocacy

At HEPER, we aim to raise awareness about reducing light pollution and preserving the natural night environment. Through our Dark Sky advocacy, we promote proper lighting techniques and sustainable lighting solutions to help preserve the natural beauty of the night sky. With the events and projects we organize, we strive to raise awareness on this issue within the community.

Continuous Improvement, Corporate Responsibility, and Transparency

At HEPER, we embrace a culture of continuous improvement to enhance efficiency in our operational processes and use our resources more effectively. We regularly review our Opex processes to set goals that optimize costs and improve operational performance through innovative solutions. This approach supports both environmental and economic sustainability, helping us build a stronger business structure.

- UN Global Compact Membership

As a member of the United Nations Global Compact, HEPER has adopted and committed to upholding ten principles related to human rights, labor standards, environmental protection, and anti-corruption.

- Communication on Progress Reporting

Every year, we transparently share our sustainability performance and progress with our stakeholders through the Communication on Progress (COP) reports we prepare regularly. These reports serve as a tool to measure our environmental, social, and governance performance and make continuous improvements.
