

The core of CLEO lies in its "Simplicity that Shapes Light."

The core of CLEO lies in its "Simplicity that Shapes Light." With its minimalist and slim design, it remains unobtrusive while highlighting the most intricate details of architectural textures.

- Length Options: 30 cm, 60 cm, 90 cm, and 120 cm.
- Power Levels: Multiple wattage options to achieve the desired illuminance.
- Color Temperatures: Wide range of CCT options for different architectural moods.
- DALI Compatibility: Full integration with smart building systems for dynamic lighting scenarios.
- IP 68 Connector: Maximum protection against water and dust ingress for reliable outdoor use.

Simplicity That Shapes Light

heper

The Architectural Interpretation of Light

CLEO is a high performance and sophisticated linear wallwasher luminaire, specifically engineered for the uniform and striking illumination of architectural surfaces. It creates visual continuity, depth, and contrast across surfaces, seamlessly integrating aesthetics with functionality in both indoor and outdoor environments.

The core of CLEO lies in its “Simplicity that Shapes Light.” With its minimalist and slim design, it remains unobtrusive while highlighting the most intricate details of architectural textures.

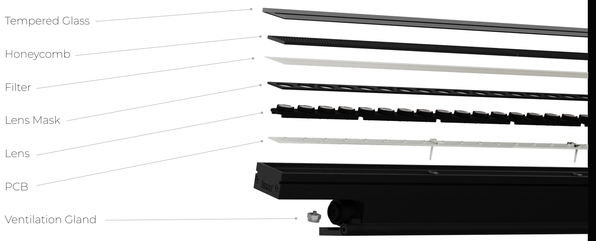

The Anatomy of CLEO

Utilizing advanced materials and precision engineering, CLEO is built to last and perform. Its modular structure consists of high-quality components

Combining advanced materials with precision engineering, CLEO features a high-quality modular structure designed for lasting performance in demanding environments. Its construction includes a robust aluminum extrusion body for superior thermal management and a ventilation gland that effectively balances internal pressure to prevent moisture buildup. The system ensures exceptional lighting quality through high-performance PCBs and precision optics, utilizing a specialized lens and lens mask for efficient wall washing. For enhanced visual performance, tempered glass provides maximum light transmittance under extreme conditions, while an optical filter ensures smooth light distribution. Additionally, an integrated honeycomb filter minimizes glare to deliver optimal visual comfort.

Adaptable to Every Scale

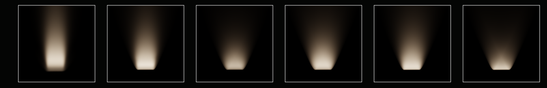

CLEO offers a modular approach to professional lighting, ensuring it fits perfectly into any project requirement. It is designed to provide seamless, continuous illumination without dark spots between units. Additionally, the system features adjustable mounting with flexible brackets and angle indicators to allow for precise aiming. The design further enhances versatility by supporting various add-on accessories and offering three different visor types to meet specific lighting needs.

Precision in Distribution

CLEO provides a variety of beam angles to suit different surface heights and textures:

- EL 10x60° / 12x35°: Elliptical distributions for tall and narrow surfaces.
- BW 60°: Wide beam for general wall washing.
- MN 30°: Medium beam for balanced illumination.
- VN 10° / 18°: Very narrow beams for sharp, dramatic highlighting.

CLEO serves as a bridge between technical excellence and artistic expression, turning every facade into a canvas of light. This range of optical precision ensures that lighting designers have the perfect toolset to balance functional illumination with dramatic visual storytelling.

From Heritage to Modernity

Given its high performance and discreet profile, CLEO is the ideal choice for diverse environments:

Bridging the gap between heritage and modernity, CLEO is the definitive choice for diverse architectural environments thanks to its high-performance capabilities and discreet profile. It offers respectful highlighting for the textures of cultural landmarks and monuments, while simultaneously creating iconic nighttime identities for modern urban facades and skyscrapers. Its ability to provide controlled, high-quality light makes it indispensable for museums and galleries, while its capacity to enhance the luxury and depth of both interior and exterior walls ensures it perfectly complements hotels and premium commercial spaces.
